

Cable Snake/Cable Raise

The Cableway Vertical Cable Management System offers an elegant and practical solution for under-desk cable management, effectively preventing the entangling of wires and concealing cable management below the desktop in office environments. Designed with dual compartments, it ensures the safe separation of Power and DATA cables, keeping them organized and free from interference. The system installs easily under the desk using a top bracket and fixing kit, neatly concealing cables to maintain a clean and professional appearance. A weighted base provides stability for the floor-to-desk section, allowing for secure, free-standing installation. This streamlined solution enhances the functionality of the workspace, eliminating clutter and promoting a more organized, efficient office.
