

## Water Proof Floor Box

The Waterproof Floor Box from Connect System is a durable and reliable solution designed to provide secure Power and DATA Connectivity in environments where protection from water or moisture is essential. Built to withstand exposure to water, this floor box ensures that electrical components remain safe and functional, even in high-humidity areas or locations prone to water exposure. It features a sleek, flush design that integrates seamlessly into the floor, offering easy access to Power Outlets, DATA Ports, and other essential connections while protecting them from the elements. Gangable for multiple units, it allows for flexible configurations to meet specific connectivity needs. The Waterproof Floor Box is ideal for indoor applications and combines practicality with robust, weather-resistant construction. It is designed to endure the weight of pedestrians and effectively protects cables from pressure and stress. Perfect for environments such as cafeterias in offices and hotels, hospitals, and other public spaces, the Water-proof Floor Box ensures seamless connectivity without compromising on safety or aesthetics.

### OVERVIEW

- Rated for 220-250V.
- IP66 box for indoor applications
- Panel Material: Brass Alloy, Stainless Steel
- It withstands water flow at 1kg/cm<sup>2</sup>
- Fully dustproof and resistant to water
- When connected, it can withstand the weight of pedestrians while protecting the cable from pressure and stress
- The hinge, which opens at less than 90°, prevents the cover from being left open accidentally and causing people to trip over it
- The top cover is completely closed when using the box
- Available in 3 and 6 Modules
- It can be customisable as per requirement
- Suitable for concrete and screed flooring
